

CASE NAME: CODEBOOKS

ATTENDING OFFICER(S): JASON LUCAS & MIKE JANNEY
 DISTRICT OF COLUMBIA POLICE DEPARTMENT
 CRIME LOCATION: ADAMS PARK

Dyson Oreck and Mystere Roboto are collaborating to pass a secret message to the Boss. The chief is assigning YOU to decrypt this message! He's had some preliminary analysis done, but all they've been able to discern is that, though it's encrypted straightforwardly for the most part, one instance of each doubly-encrypted letter has been encrypted in reverse. Also, they intercepted a note which Oreck attempted to pass to Roboto, which said simply: "4, 5-5, 4, but not the other 8." We believe this to be related to Oreck's cipher. Finally, our analysts believe that the cleartext is just a smokescreen, and that the encrypted text hides the real message. Can you crack the encrypted text and draw your own conclusions?
